

M511L SATELLITE MODEM

Description

The Datum Systems M511L satellite modem supplied by Vitacom offers state of the art performance and reliability with the best features of a sophisticated programmable modem, all at the industry's lowest price. The M511L forms the basis for a complete low-cost earth station when combined with a BUC, LNB, antenna, and cabling.

In addition to the signal, the transmit cable multiplexes on the BUC power and 10 MHz reference. On the receive side, the receive cable includes the received signal, LNB power, and LNB 10 MHz reference.

The M511L uses proprietary techniques of direct modulation and demodulation to completely eliminate transmit and receive IF sections and their associated filters. Sophisticated digital signal processing eliminates all on-board physical adjustments and provides performance within 0.3 dB of theoretical.

Direct Digital Synthesis (DDS) of the transmit, receive and data rate synthesizers allow settings to 1 Hz and 1 bps respectively.

The M511L comes standard with Viterbi and Reed-Solomon FEC. Optional turbo products code can also be purchased for improved BER vs Eb/No performance.

The M511L includes BPSK, QPSK, OQPSK, and 8PSK modulations. The unit can be field-upgraded to 16QAM modulations.

The full front panel provides a backlit LCD display, full keypad and LED indicators for monitor and control of all modem parameters.
